## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  1. Claims 1 and 2, drawn to a method of adding or deleting connectrons to genomic data, classified in class 702, subclass 19.
  2. Claim 3, drawn to a genome with a connectron with a deletion, classified in class 536, subclass 24.1.
  3. Claims 4-12, drawn to a genome with a connectron with an element that has been replaced with a synthetic DNA element, classified in class 536, subclass 24.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions 1-3 are directed to related products and processes. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the method of Group 1 does not utilize or produce the products of groups 2 or 3. Furthermore, the products of Groups 2 and 3 are structurally and functionally different due to their different polynucleotide sequences.
3. Because these inventions are distinct for the reasons given above and the search required for Groups 1-3 are different, restriction for examination purposes as indicated is proper.
4. This application contains claims directed to the following patentably distinct species of the claimed invention:

Art Unit: 1631

In Group 2, the species are species of deleted element, as detailed in claim 3, types 1-10.

In Group 3, the species are species of synthetic element, as detailed in claims 5-12 (listed as types in claims 5-12).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, in Group 2, no claim is generic. In Group 3, claim 4 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
